Research Interests and Collaborative Skills

I am a **substance use researcher with a specialization in quantitative methods**. My scientific program advances the field of prevention science through the development and application of innovative quantitative methods. My quantitative work includes extensions to latent class analysis so that researchers can discover hidden subgroups in their data and understand antecedents and consequences of their membership. It also includes the translation of time-varying effect modeling, which has been described in the statistical literature, for behavioral scientists and solving problems that arise in its application. These models enable scientists to examine regression coefficients as a continuous function of age or time, often using intensive longitudinal data. I believe that (a) new methods for analyzing existing data hold enormous potential to unlock critical scientific knowledge, and (b) this potential will not be realized until behavioral and health scientists begin to assimilate and apply them in their research. This philosophy is evidenced by the extensive network of collaborators I have built, which includes statisticians, developmentalists, engineers, psychologists, and psychiatrists, and by my commitment to the dissemination of new methods to behavioral and health scientists everywhere.

I also am a devoted **research administrator**, having held leadership positions in vibrant NIH-funded centers continuously since 2004. These roles included serving as the scientific director of The Methodology Center, a NIDA-funded National Center of Excellence, from 2004-2017. During these years I supervised many aspects of Center activities, including research communication and website development, professional development activities, a seed grant program, and the development of software products built in SAS Toolkit, Java, R, and Fortran. In 2017, I became the director of the Edna Bennett Pierce Prevention Research Center, an interdisciplinary unit with 50 full-time employees, external grants from 18 national institutes, foundations, or government agencies, and an annual budget of approximately \$13M. In 2018, I was appointed to serve as the inaugural director of Penn State's Consortium to Combat Substance Abuse. I led this University-wide Consortium to coordinate 12 faculty searches, administer a seed grant program and a Community Fellows program, organize annual conferences, and more.
